TECHNICAL SKILLS

Languages: C#, Python, Java, JavaScript, C
Backend & Web: Node.js, REST APIs, HTML/CSS, PHP
Testing & QA: xUnit, TestRail, Playwright, Vitest
Databases: MS SQL, MySQL, PostgreSQL
Dev Tools: Git, GitHub, JetBrains Rider, VS Code, Jira, Docker

EXPERIENCE

Software Developer/Tester Intern

April 2025 – December 2025

Philips

Remote

- Returned for a second internship term on the Ultrasound Reacts SQA team, expanding responsibilities from manual testing into **automation and backend API validation**
- Developed and executed C# xUnit automated tests to validate **REST API** behavior including request handling, response validation, and role-based access control
- Set up and maintained a local automation environment using JetBrains Rider, GitHub, and cloned repositories to support test execution and debugging
- Completed and closed more than **15 UAT tests** in Jira, validating server enhancements and bug resolutions to ensure production readiness
- Executed and maintained TestRail regression suites across sprint cycles covering new features, backend changes, and release validation

Software Tester Intern

June 2024 – December 2024

Philips

Remote

- Worked with the Ultrasound Reacts SQA (Software Quality Assurance) team conducting manual tests on Reacts, a healthcare video conferencing app **serving over 200 clinics, hospitals, and customers**
- Utilized TestRail to add tests to the staging test plan, creating and editing test cases, and executing **100+ manual tests** against the release candidate each sprint
- Collaborated closely with the SQA team, developers and product managers to understand new features and functionalities, and to provide timely feedback on potential issues, blockers, and bugs
- Documented and reported bugs using Jira which helped keep track of defects and progress throughout the sprint
- Participated in daily stand-up meetings and scrums with the dev team, providing critical testing insights to ensure continuous improvement and delivery of high-quality software in an agile environment
- Triggered server stack deployments to staging via **AWS** on developer Git commits to support continuous integration

PROJECTS

Uptime Monitor Full-Stack Application | *React, Node.js/Express, PostgreSQL, Vitest, Playwright*

- Built a full-stack uptime monitor with a **React** dashboard and **Node.js/Express** API backed by **PostgreSQL** that schedules HTTP checks via **node-cron**, logs response times, and emails alerts when sites go down
- Wrote a **62-test pyramid** covering unit tests (**Vitest**), API integration tests (**Supertest**), and end-to-end tests (**Playwright**), all running in GitHub Actions CI on every push
- Refactored HTTP and SMTP clients to use dependency injection so unit tests run offline; integration tests use an auto-provisioned Postgres test database with TRUNCATE between tests for order independence
- Implemented transactional log writes (**INSERT log + UPDATE status** in one commit) and transition-based alerting so the dashboard stays consistent with the check log and a single outage doesn't trigger repeated emails

EDUCATION

University of Windsor

Windsor, Ontario

Bachelor of Science in Computer Science

Sept 2021 – Dec 2025

- Relevant Courses: Object Oriented Programming, Computer Architecture, Systems Programming, Data Structures and Algorithms, Software Development, Computer Networks, Web Development
- Faculty of Science Dean's Honour Roll 2021
